

ORANGEVILLE HEARING CLINIC / ALLISTON AUDIOLOGY
Kirchberger Audiology Prof. Corp.

New Test

We are pleased to expand our testing capabilities to include **frequency lowering** to improve high frequency hearing for patients with hearing aids. Twenty years ago, it was rare to provide patients with the highest frequency sounds in speech such as “s”. Today, we provide high frequency sounds like “s” for almost everyone, even if you lack hearing for that sound. Frequency lowering technology and tests can move sounds like “s” from an region where you have no

A Year of Milestones

How time flies... For us, it began 30 years ago in 1988 with the opening of Orangeville hearing clinic at our current location. Two years later, we were contacted by the medically underserved area in Alliston and Alliston Audiology was born in the outpatient clinic at Stevenson Memorial Hospital in conjunction with otolaryngology services. I arrived on the scene in 1998 and these past 20 years have flown by as have our 10 years at Windsor House in Alliston. Eric Irvine, Audiologist for 5 years, joined the practice full time in 2013 after working as a student for several years.

Looking forward to future milestones!

Peter Kirchberger, Au.D.

Welcome Sarah and Kelly

Sarah

We are pleased to announce the addition of Sarah, early childhood educator & audiology assistant, who began working in September 2017 and Kelly, administrative assistant, who began in March 2018.

Kelly

hearing to a region where hearing exists. This provides patients with improved speech understanding. It is thrilling for us to provide these new sounds to patients who have missed them for so long!

Did You Know?

Hearing aids are not like glasses. They can be adjusted to the latest prescription many times! Annual comprehensive hearing aid evaluations ensure your hearing is optimized. Call us for more details!

Technology Corner

New hearing aid technologies include improved rechargeable batteries and improved "Hearing aid WIFI". Lithium ion batteries, similar to those used in cell phones and laptops, are becoming a common rechargeable technology in hearing aids. Hearing aids can also use Bluetooth™ and similar technologies to connect to your favourite devices. We would be happy to demonstrate!

Connecting you to the world around you.
